General Comment

Any use of an "AI Action Plan" using AI that is developed using copy-righted materials would be unacceptable. Individuals and companies ought to have the right to decide whether their proprietary content is opt-in for use in training AI - whether it is a line written on social media to photos of their children, an illustration of Mickey Mouse or a manuscript for a published book.

We've already seen how much damage AI theft has done - from purloining people's personal medical records for use in their 'generative AI training' to generating inappropriate images of minors based on millions of stolen photos of people's children. Generative AI creators have plagiarized the work of generations, and should not to pretend that blatant theft and total disregard for the rights of both individual's personal content and IP holders' intellectual property is an acceptable way to conduct themselves. Such actions should be deemed copyright infringement, and our government should absolutely not make use of such technology.
