General Comment

In regards to an AI Action Plan, I must stress the importance of protecting intellectual copyright.

Artificial Intelligence, particularly generative AI, threatens my ability to promote my creative work as a writer and artist. In order to have any sense of safety in posting my work publicly, I require a guarantee that my data will not be used to train AI. This includes my artwork, photography, and writing. As soon as I feared a compromise in my data's security in Google Documents, for example, I ceased using the platform for personal work and switched to different sites if possible.

If I have worked for a long time and spent effort on a creative work, I want there to be an OPTION of whether or not it is used to train an algorithm, and the ability to opt out. My hard work should not be used without compensation or notification to develop a system like generative AI. All creatives struggle to retain an idea of uniqueness and individuality in a time where there are no new ideas—as well as fighting to have true intellectual property of their original ideas—and data theft in order to "innovate" impacts that goal and discourages people from continuing in fields like the humanities.

If there has ever been a time to protect intellectual property, that time is now. Idea theft should not be seen as acceptable, or any personal boundaries dismissed as "burdensome", if it's in regards to online data and creative work. Private companies building algorithms for "AI dominance" should not be able to use individuals' personal work without permission, notification, and financial compensation.
