General Comment

I believe some form of regulations should remain on "AI"/LLMs scraping of information upon content. I'm a writer, and while I believe copyright protections should remain in place for my work and extend to AI/LLMs training on my work, and that they should not be permitted to do so without due compensation to myself, the creator, I also am very skeptical of OpenAI's claim that widespread use of AI will lead to better national security. Copyright protections then would not extend to the AI-produced content of such companies, either, meaning anyone could take and manipulate that content as well without repercussions. Proliferation of video such as deepfakes will continue to spread fake news. I wonder also about cinema, for instance, and the movies produced in this country. Without any protections in place, then anyone in any country, on any continent, would have even easier access to United States-produced work--including anything involved in our national security. Again, I do not see how such will ultimately benefit America.
