General Comment

The ideal action plan for "AI", as we are misleadingly referring to these generative LLM programs, is that they shouldn't exist. If that isn't possible, they certainly shouldn't be allowed to be "trained" on any sort of copyrighted material.

Not only is LLM scraping of copyrighted material so that machines can automatically plagiarize them terrible as a policy from the perspective of fairness and proper credit and compensation, but the proposal submitted here would allow ANYONE to have access to... pretty much anything. Google is one of the primary movers behind this request, but if it were to go through, anyone claiming to be "training a GenAI" would be allowed to look at Google's closed-source, proprietary software. Does that sound like less of a security issue than the current status quo?
