General Comment

Generative Artificial Intelligence (Gen AI) will cause irreparable harm to America if it is unregulated. Gen AI companies seek to exploit existing art and literature by using it to train their AI models without consent, credit, or compensation for the original creators. This is not fair use; this is theft. Allowing this to happen eviscerates copyright law and removes protections for intellectual property. This is unconstitutional, as the right to one's hard-earned property is a fundamental American value. Furthermore, throwing America's creative industries under the bus by supplanting them with Gen AI will effectively replace manmade content with regurgitated computer slop. It is inherently impossible to guarantee that all Gen AI content is reliable and of quality, so this would be both a dangerous and regressive change. Last but not least, if creative workers are stolen from and forced out of the industry, then the AI models that are reliant on their work will ultimately crumble as well as they have no new material to train on besides other Gen AI slop. In short, Gen AI is predatory, unreliable, and dangerous. Please do not allow these companies to steal with impunity, cripple America's creative industry, and harm the American people.
