General Comment

I believe AI should not be allowed to use/be trained with copyrighted images, and any images on people's social media accounts, especially those that are private accounts. Generative AI images pose a large threat to individuals' reputations and safety. For instance, explicit content can be generated that features a person who has never, and would never, take such photos of his/herself. (Minors in grade school have already faced this problem; it is not only theoretical anymore.)

I also think AI should not be allowed to use any copyrighted material for its training: writings, music, etc. AI is a threat to all creatives currently. When this technology was on the rise, many people said that no artists or other creatives would lose their jobs because of it; however, that has been undoubtably proven wrong within the last two or three years. AI is attempting to automate the arts, which are such an important part of human life, when we could instead use this technology to automate mundane tasks, and tasks that no one wants to do.
