As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-lixv-z2b2
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2400

Comment on FR Doc # 2025-02305

Submitter Information

Name: Fernando Torre

Email: [REDACTED]

General Comment

I am a graduate of the University of Missouri specilaizing in AI. The current generation of generative AI flies in the face of everything I learned there. There is no shame, no ethics, and no respect for the law.

This is what's making America not-great: we don't even follow our own laws!

If this administration wants to truly change something, they can start with that: ensure any commercial model has paid for the rights of any works they train on. Ensure anyone who does not comply has to, not only compensate the authors whose rights they've violated but pay punitive damages as well. Ensure any non-commercial models that use works without having the rights, get destroyed and are not later "converted" into commercial models.

These violations are already being challenged in court worldwide, and courts are leaning towards the fact that AI "stores" the works "in an electronic retrieval system" --the very prohibition inscribed on the first page of every book in the library of congress-- because it's already been proven that the original work can be "extracted" from the AI in a way that is indistinguishable to the customer.

And these courts are very much the ones who should be making this decision. The executive, however, can tell them how to follow it. If they want to keep using copyrighted works, we can order them to find the authors and get a rights deal.

We have the technology in America to solve this problem. We have the know-how.

Make America Great Again, Make America Lawful Again!
