General Comment

The result of changing fair use in such a sweeping manner will only hurt Americans in the long term.

Machine-learning programs, including those made by OpenAI and Google, have already been harvesting copyrighted materials. It is the reason there are numerous suits in court alleging these programs are stealing from American citizens. If one would not allow someone to walk into their house and take anything they like without repercussion, why in the world are these companies acting like it is fine for them to do the same with Americans' creative work?

Why be an American artist, musician, writer, film maker, actor? When nothing you make is protected, why make anything at all? Perhaps the current president should look at his own creative work and consider if he likes the fact it will be used by any company claiming to make a machine-learning program without any form of reimbursement.

The excuse that China is somehow a looming boogiemán is laughable, too. They simply used the opensource libraries available to make their own programs. What will stop them from taking all the copyrighted data harvested by OpenAI or Google if this is allowed to go forward? Nothing.

Copyright exists for a reason, and is one of the rights we enjoy as citizens when we create. The attack on copyright by these "AI" companies needs to be halted, and actual research be done into why they supposedly need access to any and all materials in existence.
