General Comment

I'm a freelance artist who has been rigorously creating and practicing my craft for over ten years now. I, like many of my fellow artists and creatives, am strongly opposed to any development of this Generative AI action plan.

It would be devastating to small businesses, artisans, writers, musicians, and so much more. As I understand though, the current administration has demonstrated very little interest or concern in our well being. So instead, I will focus my comments that will hopefully highlight something that you actually care about.

Encouraging the pursuit of Generative AI will be highly disruptive to even government officials. GenAI will be used against you as it is the machine that thrives off of misinformation. Being well known and highlighted individuals who clearly have a controversial appearance in the public eye, you have been and will continue to be manipulated and depicted in ways that you would likely never approve of.

Even money will be affected. You, and any company that uses large language models will actively lose money. By pursuing Generative AI, corporations would likely be incentivized to exploit stolen data trained off of copyrighted assets. The general nature of GenAI produced content makes this content incapable of being copyrighted or trademarked itself, meaning that no matter what a company makes, they will not be able to claim ownership over.

To top it off, consumers have become increasingly distrusting of GenAI affiliated products. Whenever AI is specifically mentioned, or if GenAI can be remotely seen, consumer's intention for purchasing declined. People distrust writing if they even remotely fathom it being written by Generative AI systems. GenAI cannot think, it can only steal and will even spout misinformation that it mimics on the internet. GenAI search results have even recommended making food with dangerously inedible ingredients like glue, bleach, stones, and so much more as it cannot distinguish satire from genuine advice.

By promoting the USA as the central powerhouse behind GenAI, you are directly advertising and stating that the United States of America is proud to be farce, cheap, and faulty. For the sake of trust and security, I urge you to not push forwards on the artificial intelligence action plan.
