

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-lv9v-by1d
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2427

Comment on FR Doc # 2025-02305

Submitter Information

Name: Jennifer Povey

Email: [REDACTED]

General Comment

While analytical AI (such as is used in drug searches and meteorology) is absolutely something the U.S. should be investing in, generative AI (such as ChatGPT and Grok) is highly suspect.

Generative AI violates copyrights and ethics, replaces skilled workers, and floods the internet with low quality content.

I estimate that I have lost \$6-8k a year in income as a freelance content marketing specialist since 2022, due to the combination of being replaced by AI and being falsely accused of using it due to poorly-coded "AI checkers" that false positive at high levels. I know people who have changed careers because of this and I myself am pivoting to do more fiction editing work.

Generative AI also endangers the future of the arts, a key part of human endeavor; AI cannot produce quality creative work and denies humans the pleasure and satisfaction of creating those works in the first place.

It wastes energy and CPU power, and threatens to disrupt the economy in ways that may appear positive to business, but will ultimately be negative.

Please, when developing an AI plan, consider the basic fact that AI should be used to do well things that humans do badly, not do badly what humans do well.
