General Comment

Generative AI presents a real danger not only to the creative fields of work but also to the consumer. Generative AI has negatively impacted web search filling results with unusable information that requires more time to parse and images using data that was obtained without permission often outrank actual pictures. I have seen first hand how generative AI has oversaturated the field of commission illustration devaluing the work of artists and of creative work as a whole. at the end of the day, the sad irony that we are automating things like art instead of the mundane aspects of life should not be lost to us.
