General Comment

If the government lets big tech companies train on content they do not own, they will be making a terrible mistake. They will be dooming all human artists- existing and aspiring- to not pursue their passions. Even if they still do, they will be buried under piles of AI content that's just looking at other people's content and trying to replicate it. Now, I am an artist, so I am very concerned about that, but I have more concerns beyond what effects me on a personal and professional level. I also am highly concerned about the other results from this. The fact that AI will be trying to generate its own content rather than just give you the exact thing that you have asked for means that in scientific circles, information will be harder to find, and there will be a higher likelihood of finding misinformation made by a machine. Additionally, this sets a precedent of not respecting copyright laws. That makes it so even patents will have precedent for being stolen. Do not let anyone take our work. The work of everyone across the world will not be secure. It will lead to mass intellectual property theft. I cannot fathom believing this will be a net positive for anyone- from someone without a home, to the CEO of the biggest corporation in the world.
