As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-m7tw-mw6s
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2450
Comment on FR Doc # 2025-02305

Submitter Information

Name: BRIAN REYNOLDS

General Comment

I have spent my life working in the creative arts and I am deeply troubled by the reckless advance of AI efforts without heed to the consequences. I have seen the development of AI that is trained on the hard work and talent of experienced artists which then renders their work devalued and the future of the creative arts in general endangered. All of this technological advancement is built on the notion of being first and claiming all the benefits in the name of exclusive ownership, but the costs of such advancements come from the individuals whose livelihood is damaged in the process. There HAS to be some tempering effort to this advancement. A level of recognition that just because we *can* make AI happen that maybe we should proceed with caution. Already the development of AI has had an impact on my career where the job opportunities of skilled creative experience is being supplanted by mediocre AI approximations and I fear for the future when people just throw up their hands and say "you can't stop progress". Is this progress? Replacing human talent with AI approximations? What about future generations of artists who never realize their potential because it's so easy to just push buttons in a computer and have something "good enough" be produced?

That's not even touching on the vast resources of power and infrastructure that is being spent to power these developments. The amount of money and energy put into these efforts could be used to support the wellbeing of thousands or millions of people. Real people's lives could be improved with that effort. The cost of living could be reduced.

We should seriously be paying attention to the consequences of all this effort instead of recklessly pursuing it in the name of capitalism that benefits the few while harming many.
