## General Comment

Dear Ms. Parker,

We've been here before.

When Microsoft introduced ClipArt, you could type in a few words, and get an image. You could do this several times, and get several images to combine. You didn't have to know how to draw to do it; it "democratized" art, billboards, slides.

...but we paid for that.

Every artist whose work went into the ClipArt gallery got paid...yearly. Part of the high price of Microsoft Office had the sole purpose of covering that! When some artists no longer liked the deal, they asked to be removed from the gallery, and Microsoft complied. This system worked for about two decades!

Why can't generative image AI companies use something similar? IF they need this raw material, why can't they pay for it? Do they need to be tariffed to be made to simply follow the laws that Microsoft was able to follow 30 years ago? Are we really going to be outdone by Bill F'ing Clinton?

Let's make America great again by partying like it's 1999!
