As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-mgu5-nk5o
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2469

Comment on FR Doc # 2025-02305

Submitter Information

Name: I want to remain anonymous.

General Comment

No matter how much we, the real artists of the world, yell and scream, we will forever be ignored by you, the law makers and executives of the world. For now, we can protect us from copyright infringement. It's in the law, and it's awesome. But who protects us from greedy lawmakers and executives, whose interests are only to maximize profits, and minimize efforts?

While I don't know what's being discussed behind closed doors, I want to remind you, that if you ever plan on allowing AI companies to train their models on all content in existence freely without consequences, copyrighted or not, it will put us artists at risk of losing our jobs. Jobs, we've worked decades for. AI art will never be true art, it will never have soul. It's just repetitive, soulless, boring slop. Slop, that is passable enough for you executives and lawmakers of the world.

So, go ahead and pass the law that allows all AI companies to train their models with copyrighted content, without fearing any consequences. Go ahead and live your boring life with passable AI slop all around you, only designed to please you and not care about you. Go ahead and fill your wallets with money, and your souls with lifeless slop. And then, when you start dying and deteriorating with 80, you probably won't even notice, you're already dead. Alive, but not living.

In case it hasn't been clear; I'm obviously against any plans of a law that allows any company to train their AI models with copyrighted content, without any consequences. I want companies to face consequences and high fines, if they ever train their AI models with copyrighted content.
