As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-mhhf-e5hd
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2471

Comment on FR Doc # 2025-02305

Submitter Information

Name: Ryan Linn

General Comment

So, let's start with the obvious: This hurts more Americans than it helps. Point blank, the number of Americans working on or involved with AI to the capacity required to benefit from this is minuscule compared to the number of Americans who are having their blood, sweat, and tears from their hard work harvested en masse without permission to fuel AI development. Those are the Americans who should be protected. Their jobs are what bring value to our country.

AI should have more stringent requirements on what it can and cannot scrape for its models. Without at least written consent of the party being scraped, that is tantamount to theft. That would be like someone buying a Tesla, removing the identifying branding and replacing it with their own car company branding and saying "I made this car". Anyone with eyes knows that's still a Tesla and Tesla would be within their rights to sue. Why should that not be the right of the creators that are being used to train these AI engines without their consent?

We want to be the leading voice of AI in the world? Then lead by example, lead by requiring stringent requirements of AI engines and hold them accountable. We protect our creators and give them the option to participate in AI training or to opt out and enforce that choice with the engine creators.

AI has a place, but it can't be at the cost of others. As it stands, AI is the wild west of tech, would it not be more prudent to implement order and process to it than to let chaos reign? If we want our AI endeavors to be successful and not money pits that are constantly saved from tanking by government loans, we need to look at them on a fundamental level and rethink how these companies generate revenue. We can't just rubber stamp them to run wild across the internet and toss copyright to the wayside for the sake of trying to help one struggling industry at the cost of multiple others. I urge you to rethink this idea and go back to the drawing board.
