General Comment

Not only would the removal of copyright law affect the hard working and producer of America, it would also allow countries (like China cited here) to access those materials freely.

Making this seem like a bailout of American AI company avoiding court cases they have been slowly failing at.

Copyright gives power to our creatives to be protected both in our country and overseas.

Removing that protection would prove disastrous to keeping our creatives willing to work inside the US, and would damage many industries that are America's strengths.
