General Comment

Allowing companies and monopolies to have an exemption from copyright infringement will absolutely destroy the American economy in ways that will take years to recover from, if it is not stopped. These companies have been claiming they can replace workers with AI, but workers are essential to the economy. If no one works, no one can earn money to spend money. These companies don't want to spend money to pay workers, but people will not be able to buy their products if AI is used to replace them out of a job; the money must flow and come from somewhere.

Furthermore, this risks making America's soft power and creative industries rife with subpar creations, weakening America's industry image. There is absolutely no need to replace the creative industry with something that cannot replace it in the first place. Furthermore, AI poses as a great threat to journalistic integrity, which is already weakening. If companies are able to freely use any copyrighted materials, they will be able to create fake "actors" from other people's faces; the possibility of never needing another human actor is there, and is that what we want?

Quite frankly, these companies' so called plans for AI are incredibly ignorant of how the rest of the economy and industries work outside of Big Tech, but it is trying to reach far beyond it's authority. Other sectors must be consulted and there are many opposing voices in many of the industries they are claiming to undermine. If this moves forward then America will have lost it's creative power and the consequences will be unimaginable.
