

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-mq0s-mqlc
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2489

Comment on FR Doc # 2025-02305

Submitter Information

Name: Mark Brown

General Comment

Generative AI has raised significant concerns among creatives, particularly regarding its reliance on copyrighted material. Many AI models are trained on vast datasets scraped from the internet, often including artwork, books, music, and other intellectual property without the creators' consent. This has led to ethical and legal debates about whether AI-generated content constitutes derivative work or outright infringement. For artists, writers, and musicians, the widespread use of AI-generated media threatens their livelihoods by flooding markets with low-cost alternatives that devalue original work. Additionally, AI can mimic specific artistic styles without proper attribution or compensation, effectively erasing the identity and effort of human creators. A fair policy is needed—one that prevents generative AI from using copyrighted works for free and ensures that any works included in training data are identified, with creators properly compensated. Without such protections, the creative industry risks being undermined by technology that profits from unpaid labor while sidelining the very artists who drive culture forward.

This is a major concern for me and our small start-up. We are a company that publishes speculative fiction, and we're already seeing how the use of AI is eating away at our market. Generative AI does not create anything truly new; it is a glorified auto-complete that ultimately undermines what it means to be human. Any policy the government implements should not rely on the stolen intellectual property of creatives.
