General Comment

"Ensuring the United States is the undeniable leader in AI technology"? It's a tech bubble, and a painfully obvious one at that. AI is wrong about known facts just as often as it is right, hallucinates information frequently, and sometimes can't even do math correctly - the one thing computers are supposed to be good at. This is embarrassing. What if this effort was directed towards making our country an undeniable leader in literally anything more useful, like superior agricultural productivity or cutting edge medical technology or something else tangibly beneficial to the American people?
