

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-mzd4-3qn8
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2507

Comment on FR Doc # 2025-02305

Submitter Information

Name: Max Lampi

General Comment

Generative AI and most of the AI industry, if you could call it an industry and not a mafia, is an unprofitable massive scam built off of slave labor, stolen goods, and numerous human rights violations. It's also a massive waste of resources, namely water and electricity, that are better suited to be used for anything else.

Where do I even start?

AI companies believe they have the right to not only steal, copy, and distribute other people's copyrighted material, they also believe they have to right to put those people out of business by weaponizing and profiting off of that stolen copyrighted material. This is the entire purpose of Generative AI; mass-producing forgeries on an industrial-scale by using creator's own works against them. Lest we forget, forgery is a crime, and giving AI companies carte-blanche permission to continuing stealing and replicating people's work by mass-producing forgeries of their work is not just immoral, unethical, and illegal, it destroys the very purpose and reason copyright exists, namely to give creators control over their work and how their work is used. It's how creators can legally protect their work from being used for profits that they never see. AI companies are now using creator's works against them, AI companies who are now bribing the United States government with stolen money and valuations built off of that theft and exploitation.

AI companies on the other hand know that they are running a sham business built on stolen goods. There are a number of articles where an AI company head will claim that legally requiring licensing be respected will make it impossible for them to make an AI model, and that AI models **must** use copyrighted material to function. How is this not an admission to theft if the product they are selling they openly admit cannot function without the work of others?

Not only do these programs cause more harm than good, currently as far as I know, there are no profitable AI companies. All their valuations are inflated because of speculator value, and their services all lose money from being used. This means each time someone uses one of these "free" programs, the AI companies are losing money from server costs, generation costs, inference, etc. from the barest use, and AI users love constantly using these programs. AI companies are aware they are forever in the red, as AI companies require constant Venture Capital funds for their unprofitable mafia pretending to be a business. Not even AI as a paid subscription service can offset the costs.

This means AI companies are burning money on causing problems that hurt creators, consumers, and make both of these groups lose money too. No one is winning in this situation, regardless of licensing deals. AI companies are a parasite that drags the creators of the world down with it.

And why should any creator license their work to an AI company? On top of replacing your job... AI outputs are uncopyrightable.

This has been a consistent ruling by the Copyright Office, which makes sense for a number of reasons given that AI itself is a form of data laundering. If AI outputs became copyrightable, I could easily make a bot that wastes a ridiculous amount of electricity and have an AI image model generate every single possible image, pose, angle, lighting, color, characters, etc. and own the copyright to everything that could potentially be, thus destroying the purpose and incentive of copyright in the first place. So kudos to the Copyright Office for maintaining their integrity. AI outputs must never be allowed to be copyrightable, much less be subjected to our retinas.

I argue that AI models, especially generative AI models or search recommendation algorithms, should be outlawed without exception on the very basis that their existence is parasitical and a crime against humanity. The supplanting of art and culture by people in favor of algorithms that can only exist by that art and culture being stolen and copied from is evil. Generative AI is an inherently unethical and evil technology built by unethical and evil people. It has no right to exist in the first place. Protect human artists and creators first and foremost, because if you fail to protect the very people you represent, you no longer represent them and are ill-fit to be running the government.

Google, Anthropic, Microsoft, Meta, Amazon, Runway, Midjourney, StabilityAI, and OpenAI are all criminal organizations acting together on this issue. Find the people responsible in these groups for unleashing their AI problems onto our society and punish them with jail time.

No more AI.

We've had enough.
