## General Comment

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

I am a graduate of the University of Missouri specilaizing in AI. The current generation of generative AI flies in the face of everything I learned there. There is no shame, no ethics, and no respect for the law.

This is what's making america not-great: we don't even follow our own laws!

If this administration wants to truly change something, they can start with that: ensure any commercial model has paid for the rights of any works they train on. Ensure anyone who does not comply has to, not only compensate the authors whose rights they've violated but pay punitive damages as well. Ensure any non-commercial models that use works without having the rights, get destroyed and are not later "converted" into commercial models.

These blatant and ongoing violations are already being challenged in court worldwide, and courts are leaning towards the fact that AI "stores" the works "in an electronic retrieval system" --the very prohibition inscribed on the first page of every book in the library of congress-- because it's already been proven that the original work can be "extracted" from the AI in a way that is indistinguishable to the customer..

And these courts are very much the ones who should be making this decision. The executive, however, can tell them how to follow it. If they want to keep using copyrighted works, we can order them to find the authors and get a rights deal.

This is no different than the challenge Microsoft faced in the 90s when they introduced ClipArt: democratising advertising and slideshows required being able to generate illustrations for them with a few key words. However, Microsoft PAID for those base illustrations, and repaid every year to keep having the rights. Artists who made the illustrations could opt out at any moment if they didn't like the deal, or what people were doing with their work, and Microsoft would remove their works from the ClipArt Gallery.

We have the technology in America to solve this problem. We have the know-how. We have the legal and logistical infrastructure. That's what makes us the greatest country in the world!

Make America Great Again, Make America Lawful Again!
