As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-n4fu-t673
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2519
Comment on FR Doc # 2025-02305

Submitter Information

Name: Patrick Menard

General Comment

I am a tech worker and I have serious concerns with the path AI development is going down in this country. Specifically, the phrase "ensure that unnecessarily burdensome requirements do not hamper private sector AI innovation" makes me worry that the large AI firms are pushing to undermine our copyright law and render our intellectual property laws meaningless. This is particularly concerning in light of China's DeepSeek, which for far less money, time and energy produced an open model that easily rivaled the most advanced AI in this country, yet AI firms here seem intent to compete with this not by improving the underlying structures of their products, but instead by attacking the protections this country is supposed to have for intellectual property.

I have my concerns with the efficacy of AI in many if not most situations where it is currently used, and I strongly believe that blindly running down our current course of AI development will erode the quality of our very society let alone the products it produces. If we truly desire to lead the world in AI, then the goal should not be to produce the most cumbersome, brute force, expensive and intrusive AI, but rather to create the most efficient (faster, less energy intensive, less water intensive, etc), accurate and targeted AI to achieve unmatched quality in specific sectors to which AI is most well suited. A catch-all approach that violates the basic principles this country is supposed to stand for will not make us a world leader in this industry. Please don't cave to pressure from the big AI firms, instead encourage them to do better. The best innovations often arise from difficult situations—making the life of AI firms easier and deferring to their every whim will not push them to improve at all!

Please, regulate AI not just to protect intellectual property, prevent waste (time, money, energy, water, etc) and so on, but also to push these AI companies to rethink and innovate how they operate instead of coddling them resulting in inefficient, stale, cumbersome, deeply flawed and expensive products that will easily be outcompeted by companies in other countries that take this more seriously.
