General Comment

I strongly believe that Artificial Intelligence (AI) has no significant benefit to the future of America.

The unchecked advancement and usage of AI seeks only to alienate and threaten human creators in a variety of fields, and to further commodify the products of professions to which many Americans have dedicated their lives. The usage of AI generated media (images, video, voice-overs, etc.) in lieu of media created by humans creates a deceitful and cheap impression of the individuals or businesses which use them, causing more harm to one's reputation than reduced costs can justify.

I, and the vocal majority of other American creators, feel strongly that ensuring the rapid development of AI is far from a crucial concern for America, and should not be treated as such.
