General Comment

Generative AI causes more harm than good. *Certain* AI is good, like the kind that was used to distinguish bread types and accidentally figured out how to spot cancer cells. GenAI, the kind that scrapes unknowing people's data to spit out garbage and wastes innumerable resources, is not. It will do the opposite of what you intend it to. Not to mention, privacy is a major issue.

AI is meant to do well what humans are horrid at, not to do horribly at what humans excel in.
