Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-02ez-zxxw
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2577

Comment on FR Doc # 2025-02305

Submitter Information

Name: Zachary Tarwater

General Comment

Humanity is defined by what we do and what we create. Technology has allowed us to make great leaps and alleviate human suffering in a scale that has never before been seen, especially in such a relatively short time as the last few hundred years.

I believe AI can be a tool to help take that even further. In medicine, in engineering, in the economy, urban development, farming, the list goes on.

However I do not feel that that is the goal for many people pushing and developing these models. Especially when it comes to generating art and images, something that is so uniquely human and that is a craft we have been building on for as long as we have existed as a species.

I understand that artistic expression is not a universally cherished ideal. That is why it is important to understand that generative AI is not just being used to cheaply copy an artists style or body of work.

As AI has advanced over the last few years it has become harder and harder to recognize AI deep fakes for what they are. Soon it will be impossible.

The ethical, legal, and political ramifications for this are boundless.

Eventually, any image of any child can be used to create child pornography. Evidence of crimes including surveillance and crime scene photos will be tampered with to wrongfully convict innocent people or acquit dangerous criminals. Political figures will have their likeness stolen and be made to appear to say or do anything.

The effects of this technology will be widespread and uncontrollably devastating to our society and civilization as a whole.

It is imperative that the development of generative AI be halted until we can better understand how to regulate it.
