As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-o2j3-pen0
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2578

Comment on FR Doc # 2025-02305

Submitter Information

Name: Chandler Lazear

Address:

General Comment

Any laws on AI must adhere and respect pre-existing copyright protection laws within the United States. Copyright both protects the work of innovators, inventors, and creators while incentivizing them knowing their work is protected. One of America's central points as a world leader is it's innovativeness in technology and industry but if AI and corporations investing in AI technology are given backdoors and loopholes to duplicate anybody's work with legal impunity it will swiftly spell the end of America's place as a global innovator as all attempts by individuals to benefit or profit from their IPs and their work will be seized by AI. AI while a new and enticing technology that should be explored to stay competitive with other nations it should not come at the price of gutting copyright laws which have enabled America's progress for so many years.

Not only would it be harmful to the American Entrepreneurs, it would be harmful to the AI itself as it's learning relies on humans continually creating something new. But if we are to keep creating new content for AI to learn from, copyright laws must remain in a way to ensure the profit incentive to keep creating that new content for human creators exists.
