Dear White House OSTP Team,

Comment in response to the RFI on the Development of an AI Action Plan

Thank you for the opportunity to share our views with the drafters of the AI Action Plan to be developed pursuant to President Trump's Executive Order 14179. We also appreciate the efforts of the Networking and Information Technology Research and Development (NITRD) National Coordination Office (NCO) within the National Science Foundation in administering this RFI on behalf of OSTP.

About Enzai Technologies

Our company, Enzai Technologies, provides an AI governance, risk and compliance software platform to Fortune 500 customers around the world. Our team has deep expertise in developing intuitive, yet comprehensive, AI governance frameworks. Our software solution helps companies implement and operationalize their AI governance programs at scale, while aligning with voluntary and mandatory laws, standards and frameworks, including the NIST AI Risk Management Framework (AI RMF), the AI Management Systems standard from ISO/IEC (ISO/IEC 42001), the European Union AI Act and the Colorado AI Act.

Recommendations

We believe in AI's immense potential to improve people's lives and drive economic growth. We acknowledge the Trump administration's emphasis on enabling private sector innovation. Our recommendations in this comment are informed by our close work with private sector organizations as they seek to deploy AI systems with confidence while mitigating their risks.

Recommendation 1: Articulate a positive vision for how AI can help people.

AI has demonstrated enormous potential in scientific research, healthcare, business innovation and education. Given the Trump administration's focus on "AI opportunity," the AI Action Plan should articulate a positive vision for how AI - and particularly frontier AI - can help people. This positive vision should include specific outcomes, such as providing high-quality, personalized healthcare for everyone who needs it, equipping businesses with the resources they need to deploy AI with confidence and empowering students of all ages to learn in a way that suits their goals, personalities and circumstances.

Recommendation 2: Anchor international research efforts related to frontier AI.

Due to their advanced and rapidly improving capabilities, frontier AI systems pose a unique set of challenges that transcend industries and borders. We agree with the Trump administration's view that given America's strengths in frontier AI, American leadership on the global stage is indispensable. Once the administration has defined its positive vision for the societal benefits of frontier AI, it should support this vision with specific frontier AI-related projects, with the support of international collaborators.

These projects should focus on both thematic areas (like explainability research) and sectoral areas (like life sciences). One outstanding model for such projects is the Human Genome Project (HGP), a bipartisan 13-year effort to identify all the base pairs of the human genome. Though Americans led the HGP, participants from the United Kingdom, Japan, France, Germany and China also made significant contributions in funding and expertise. HGP insights enabled significant private sector innovation in healthcare and life sciences. Thanks to the HGP, researchers were able to rapidly sequence the Covid-19 virus and develop vaccines in 2020.

Developing, funding and obtaining international buy-in for specific frontier AI-related projects will promote American leadership internationally and support private sector innovation in the long term, while addressing the unique set of challenges posed by frontier AI.

Recommendation 3: Set rules for the federal government's use of AI.

Despite AI's vast potential, its rapid evolution challenges existing institutions. Scientists must think carefully about when and how to use AI, while adhering to longstanding research norms and methods. Educators must adapt to and shape the use of generative AI tools by their students. Companies often lack clear guidance on "what good looks like" when deploying AI - delaying rather than enabling their use of AI.

Given these realities, the administration should set clear rules for AI use in government, including by revising and strengthening the Office of Management and

Budget (OMB) Memoranda M-24-10 and M-24-18 as envisioned by the President's Executive Order 14179. These rules should state which AI uses are high-risk and how to mitigate risks. Though existing privacy, cybersecurity, anti-discrimination, and sector-specific considerations provide a strong basis for setting AI rules, they need to be supplemented in ways that consider AI-specific challenges, including adaptability, explainability, autonomy and scalability. Even though these rules will only apply within government, they will both send a clear signal to the private sector and help shape the market through government procurement efforts.

Recommendation 4: Recognize important technical standards and frameworks.

AI governance efforts have come a long way in the past decade. Technical standardization organizations including NIST, ISO and IEC have published well-developed voluntary standards and frameworks for AI use, including the NIST AI RMF and ISO/IEC 42001, in addition to adding AI consideration to their cybersecurity frameworks. Standards organizations in industries like financial services and healthcare have also layered AI considerations into their technical standards. In many cases, industry organizations have already aligned with these frameworks and standards because they provide a shared set of definitions and concepts upon which practitioners can build.

As the Trump administration develops its AI Action Plan, and in alignment with its positive vision for the societal benefits of AI, it should identify and articulate the standards and frameworks that it considers credible within each industry. This will send a powerful signal to industry and kickstart private sector innovation.

Thank you again for the opportunity to comment and for your work in this crucially important area. If you would like to discuss any of these issues further, please get in touch by e-mail at [REDACTED]. We look forward to learning more about the AI Action Plan in the coming months.

Sincerely,

The Enzai team
