General Comment

Generative Artificial Intelligence (AI) has proven to provide not only false information but used to create plagiarized works of art, videos, music, and writing. It is a tool used only to steal the works of others without providing proper source or credit or to create false claims and fake data for things that are otherwise incorrect. It is a dangerous tool and should have its use discouraged or banned outright due to the nature of how it requires the companies using it to acquire data and information from others without their knowledge or consent. Furthermore it has been used to create deepfake images of real people in various situations, some of which are explicit as a way to harass or potentially harm the subject. AI takes away from real American jobs and makes a mess for those it has not yet replaced due to how incorrect the data it provides is. Generative AI needs to be regulated or stopped all together for the sake of the American people and all peoples around the world.
