As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-ojr5-dqv5
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2613

Comment on FR Doc # 2025-02305

Submitter Information

Name: Amber Hooke

General Comment

Unrestricted generative ai is a threat to the jobs and livelihoods of many America artists and creatives. By removing restrictions from ai companies and programs we are ultimately only going to be harming real working people in our country. Right now companies are using generative ai to mine writing, photos, and artworks from all over the internet often without permission from the people who own them. Even now ai is being used to profit off of stolen intellectual property, and if ai can be copyrighted this becomes even more ethically and legally dicey.

But even if you ignore the impact unregulated ai will have on creatives, you cannot ignore the impacts it can have on the lives of all citizens. Ai can be used to generate images or videos of people without their consent, and those videos or photos can contain anything, including harmful or illegal material. Ai programs that were implemented in prisons have shown to be incredible biased, and caused certain individual to not be allowed parole, based not on their behaviors but based on biases with the ai system. These systems are often proprietary so there is no way for the user to know if they include biases in them either. I also think it is worth mentioning that many ai systems use tremendous amounts of power and electricity that is both harmful to waste, and causes unnecessary environmental damage. Because of these reasons I do not think it is a good idea to decrease regulations on ai technology. I think ai moving forward should be considered with more concern for its ethics and the effects it has on others.
