Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2631
Comment on FR Doc # 2025-02305

Submitter Information

Name: Cameron Reed

General Comment

I oppose the tone of this AI action plan. It speaks of 'unnecessary requirements' that burden the private sector. This is very concerning given Large Language Model's tendency to be trained using copyrighted works, without consent of the copyright holder. There's been numerous reports from journalists on how even AI CEOs admit it can't exist without taking copyright material (See: Salon - <https://www.salon.com/2024/01/09/impossible-openai-admits-chatgpt-cant-exist-without-pinchng-copyrighted-work/>). AI is also a serious energy hog as well as takes a lot of fresh water to operate.

Barreling forward with no consideration for requirements on this technology will lead to considerable unnecessary waste, IP theft/infringement, and stranded assets as data centers boom and bust. And god forbid the government subsidize this, sending tax payer dollars into private benefit. The companies are already investing billions of dollars on their own, this does not need the US government further throwing this into a mad race of whatever resources these LLMs can chew up.

Any AI action plan needs to be focused on how these can be ethically trained, without taking copyrighted works for small and independent and large artists alike. It needs to reckon with the strain these models will place on the energy grid and on our water supply. It needs to reckon with the job displacement that will be inevitable as more of these models are used in the workplace. These things do not need less limits, they need more, or they are going to break several aspects of the American system.
