Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2647

Comment on FR Doc # 2025-02305

Submitter Information

Name: Danielle Bownes

General Comment

Regulation helps prevent boom and bust cycles. AI is no different.

Artificial intelligence is a threat to everyone's privacy, which is already being invaded at an alarming pace. The companies that are most interested in this have already shown that they are grossly unethical. AI requires far too much energy that will poison everyone. It can also be used to make disturbing imagery, such as the video of Trump sucking Musk's toes.

AI is prone to bias, even on very arbitrary things like addresses. Their own designers also cannot properly explain how the system reaches its decision. It can also easily be weaponized by criminals and terrorists.

Artificial intelligence displays poor judgement and humans can easily lose control of it.

The drawbacks outweigh the benefits. IF artificial intelligence is going to be used, it needs to be carefully controlled.
