Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2666

Comment on FR Doc # 2025-02305

Submitter Information

Name: Nicole Vrabel

General Comment

Dear whom ever this concerns,

My name is Nicole, and I recently just graduated from an art college and now work full time in the entertainment industry as an associate concept artist. All my life I have been in love with the process of creating. From stories to characters, I have found my earliest childhood hobby to be art. I would doodle any chance I could get, from my free time in public school to sitting down and creating full illustrations at night. In short, art has been a defining force in my life, to the point that I decided to pursue it as a career for the day I became an adult. That day has finally came, and I have never been happier to work in my life.

Generative AI started to become relevant around halfway through college, where I have invested already so much money, energy, tears, and accomplishments. When I began to see this new technology be used as a tool to replace the arts - my heart felt on the verge of breaking. I watched as artists I have looked up to, have their original creations be shredded and crunched as data without their consent and used as a replacement for their work. This isn't simply technology evolving to help fellow men, this is technology that is being used to destroy careers - potentially in the future, if unchecked, to cause a soaring rate of unemployment within our economy. Not just in the arts - but essentially every field of work.

Not only that, generative AI has been used to create deepfake porn of women and minors - create false and dangerous information - and fill the once resource filled internet, with junk that isn't even real. An argument can be made that generative AI has regressed technology than actually progress it-the opposite of what it has been claimed to be doing.

I find the consequences of continuing down this path of development- without proper restrictions, ethics, and regulations - will hurt our country more than help it. Hurting current copyright laws - which ensures our work be protected as individual property - goes against everything America has advocated for.

There is no such thing as innovation from regurgitation. There is no such thing as personal property without IP protection. And there is no such things as a pursuit of happiness when squandering the rights of millions of Americans dreams to work on things with passion. We do not want a grotesque inflation of content to feed a machine for the sake of "looking" productive and creative.

Computers and the internet has helped humanity reach resources that previously couldn't and has help aid in everyday work. This advancement helped spring new jobs and supply old ones with help instead of replacement.

Generative AI has done nothing but hurt working class Americans, the arts, the humanities, science, and critical thought. I have yet to find an example of true benefits to scrapping data without care - a problem that has existed even before AI with tech companies and something that many Americans agree was a problem then and a problem now.

I beg of those who take the time to read this, to really think of the individuals in the present, and not the future that is being sold. We, in the now, will suffer. And if we in the now suffer, than how are we suppose to move forward without dragging that misery as well. I want and deserve a future that is built with good intentions and care, not a future that was privatized for greed and power.

Thank you for your time,

Nicole Vrabel
