

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-p5g3-iyaj
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2669

Comment on FR Doc # 2025-02305

Submitter Information

Name: Ulysses Aguirre-Ximenez

General Comment

The "product" being shoveled out as "AI" is not the same computer-assisted learning tools that we were using and making progress with a decade ago. The modern "AI" product is a resource wasting monstrosity that has no focused learning, and compiles everything without consequence. Servers churn and produce slop instead of being an assistant. Text to speech is now replaced with a bot that regurgitates every piece of information it has pulled from as many websites as possible in the form of a misinformed paragraph. Brands are now replacing their design department with sloppy images that will never spell the name correctly. Generative AI, as it is called, produces a soulless product that no one finds inspiring. The general malaise that "AI" has brought about among the general public on top of the damage it has done, before we even get into the copyright mud, is enough to show that it isn't worth it to invest in the current technology. Investors are jingling keys in front of us all with bogus promises of profit and exponential growth, however there is an economic fallout that will follow as the tech fails to deliver on a widescale. This beast that is being dubbed as AI is not good, and we must go back to the drawing board to study and find technology that propels automation the right way and not one that hurts workers and potentially our economy.
