General Comment

AI has a proven track record of failure. Studies consistently show that answers it gives are often confidently wrong, and that consumers are LESS likely, NOT MORE, to buy a product that's advertised as having AI features. AI-generated visual art often has obvious errors and an off-putting, noticeable digital sheen, and AI-generated music only exacerbates an industry where artists struggle to make a living, while dragging down the quality of an ENTIRE MEDIUM of self expression. And for what? Crap. Plain and simple. AI-generated content is crap. No one likes it. Anyone who says they like it is lying to hide an ulterior motive.

OpenAI, the leading firm by far in terms of AI research, has repeatedly walked back their promises, raised costs in a vain attempt to chase profitability (their costs outweigh their revenue SEVERAL TIMES OVER), and said that perfecting their model requires MORE DATA THAN IS AVAILABLE.

Of course, the data they've BEEN using has been acquired without ANY REGARD for existing copyright law, establishing the precedent that apparently, COPYRIGHT LAW CAN JUST BE IGNORED. Is that the kind of precedent we, as Americans, with the biggest and best entertainment industry in the world, want to set? Of course not!

AI is an abject, objective failure, by any metric, and it's time to accept that. The only people that want AI, are those who stand to profit from it.
