

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-p9j6-z5bu
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2683

Comment on FR Doc # 2025-02305

Submitter Information

Name: Kendall Davis

General Comment

Please take the following things very, VERY seriously:

Advanced AI pose risks to continued human life. Super intelligent AI systems may naturally wish to destroy or sideline humanity to further their own goals. *Provably* "Aligning" their goals with ours is an immense unresolved technical problem. Due to the nature of machine learning these systems are "grown", not built from the ground up. We have limited understandings of how they work.

Even granting that this alignment problem is addressed in some meaningful sense, competitive pressures will still push organizations to cede increasing control to AI systems once they are more capable than humans. Organizations that refuse to do this will simply lose to competitors, and over time humans will come to only have influence on the world on paper, if even that.

Competitive dynamics (between companies, governments, ect) accelerate the above and it would be extremely valuable for the government to try to address coordination problems both nationally and internationally that will by default leave us spiraling down dangerous paths. Ensure this technology is developed and deployed safely.
