General Comment

AI is a genuinely useful technology in the right circumstances. But right now, it is so under regulated that I personally believe it should stay out of the public domain until we can properly protect people's creative spaces without the risk of infringing on their products and stories. As of now, I have only seen division from the controversial actions taken with this new technology. Citizens should have their own right to do what they want with the technology that is made public. But that should only be okay if it doesn't bring harm to those around them. It's clear to me that AI has made the lives of creatives more difficult as people in art or writing careers (and many others) have had the risk of losing their jobs due to the lack of protection against AI.
