General Comment

The training of AI on copy-written works without permission is a explicit violation of the rights of creators to protect the unique output they create and such a weakening of those rights stifles innovation. Students get expelled from colleges for plagiarizing other people's works, people and businesses get sued and stopped from selling or making products if they are using other people's works, in every other part of the legal system copyrights are protected. Why should AI get special treatment? If it is impossible for them to develop AI without using people's copy-written work without their permission, it shouldn't be created. If I said it was impossible to make my own movie studio without having the freedom to use Warner Brother's movie scripts, assets and audio for free and without permission then I would rightly be told that my movie studio deserves to fail then. If it is isn't economically viable to create AI without violating copywrite laws, then that is the market deciding that AI shouldn't exist as a profitable business. You can't say that the market should decide winners and losers but then get mad if it chooses a loser you didn't want it to.

I know that this will be ignored because the United States government is dedicated to doing whatever is the stupidest, most evil thing it can but I will still yell at the top of my voice to waste every second of it's time and every dime regardless.
