Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-pje4-81ie
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2720

Comment on FR Doc # 2025-02305

Submitter Information

Name: Samuel Burghoffer

General Comment

As one of the Americans assaulted by "Generative AI" (Gen AI, going forward) over the past three years, I am deeply opposed to any plan that further empower the "industry".

Plainly, given that Gen AI constantly seeks to directly compete with the same human craftfolks whose crafts it wishes to train on, it would be disastrous to copyright to allow Gen AI to train on all materials indiscriminately. Copyright is to protect creators' incentive by discouraging competitors from simply stealing their work - if you allow Gen AI, which does not create but simply repackages what it has been trained on, to breach all copyright law, then you are hurting American workers and industries in creative fields by taking away their protection and incentive.

Proponents argue that without this breach of proper business protections, US Gen AI companies will fall behind China - to which I would respond that this isn't a concern. The current Gen AI technology has been nothing but a scourge forced upon the American public so far. While some AI technology has been beneficial to some fields, Gen AI has shown no valid use. Americans are, by in large, so critical of the technology that adding it has hurt sales for various companies. The propositions for it are unenticing at best, catastrophic at worst; the technology continues at this time to be extremely inefficient (and increasingly so with each new generation) and has embarrassingly low efficacy. So far, advocates for Gen AI have failed to prove that this is a technology worth preserving, let alone considering an "advancement".

Our time and energy would be much better spent protecting American workers from Gen AI, not the other way around.
