General Comment

The implications of unfettered AI exploitation of human copyright is so far beyond what is being considered by AI proponents that it is gross negligence and ignorant optimism. They're so gung-ho about eliminating copyright protections that they don't even realize that OTHER AI startups can simply steal from their supposed "work" and they lose all value instantly. Not that they have that much value; when the one of the main proponents of AI claim that their golden goose will not "suddenly come up with unrelated/unwanted ideas," it doesn't fill me with much confidence on the "creativity" of AI tools.

AI is an affront to human creativity and completely disregards existing copyright law.

We'll see how well AI performs when, say, Disney properties suddenly get scraped for their tripe or Warner Bros or ANY entertainment based company.
