General Comment

I do not believe AI has any benefit to the future of America.

AI has proven time and time again to only benefit those who steal and take credit for work that isn't theirs.

AI is fully reliant on the input of other human works, most of which are not sourced directly from the person themselves, but from unknowing third-parties that never consented for their work to be taken in the first place.

This leads to a clear infraction of both intellectual property and copyright law. AI should not be made an exception under any circumstance.

The work and process of human creativity and the value in making things like art, music, or anything in a creative space will ultimately suffer greatly if AI is allowed to run rampant without strict limitation. We should strive to protect those who share their ideas, concepts, visions, and work. These things keep culture alive and promote creativity in the individual. Not through a medium that has no human sense of culture, direction, ethics or morality that creates the end product for them.

If anything, we need more regulations and protections in place to safeguard people from AI and the dangerous things it can be used for both foreign and domestic.
