General Comment

This is a massive and concerning infringement on the copyrighted works of journalists, professional authors, and small publishers. Language learning models (LLMs) that tech companies use to train their AI are stealing the original works of online publishers, the majority of whom are small business owners who make their living from digital ads on their websites. Already these LLMs have put thousands of small business owners out of business, and without regulation, this has the potential to destroy tens of thousands of small businesses, as well as large, corporately owned publications who depend on their website ad revenue to pay staff writers, editors, photographers, and journalists. The ramifications are widespread and devastating. The Internet needs MORE regulation on AI, not less.
