General Comment

Companies training AI already do not respect the privacy of users nor copyright infringement when crawling the web for datasets. We should be putting more regulations on the use of user data, not making it easier. I don't want my writing, my art, my likeness to be used as training data. We should be exercising our concern about the Chinese government hoovering up Americans' sensitive information on homegrown industries as well - there's no reason for a double standard. It's creepy if a foreign government has this much information about me. It's just as creepy if OpenAI does too. Privacy is a basic human right and is one we should be careful to balance with the near necessity of being online in the modern world. Please don't remove even more guardrails on this.
