General Comment

Allowing OpenAI to train its models on copyrighted work will directly harm American artists, developers, and creatives. Under the guise that it is a matter of "national security," this action will harm the citizens it is claiming to protect by stealing their work, which is a direct threat to their livelihoods.

Humans are intelligent and digest art, literature, and knowledge from others and then use that to form their own ideas and work. However, we as humans discourage plagiarism and direct copying without permission or attribution, and as such should do the same with generative AI models, whose existence is contingent on stealing from that which already exists.
