Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2775

Comment on FR Doc # 2025-02305

Submitter Information

Name: Rachel M.

General Comment

I have been actively threatened by artificial intelligence for quite some time now ever since its debut around 2023. I absolutely do not trust this technology, as it has been proven to make far more highly damaging errors than an educated human would ever make. Hearing that it was introduced into our healthcare systems makes me very scared that it'll make a highly damaging error that could kill me or my loved ones.

The risks this technology poses is HIGH, as within the educational environment alone, it's noticeably causing a lack of work ethic & problem solving skills in students, as they just run an "AI" program to do all of their schoolwork & even reading for them via generating chapter summaries for them; half of the time with incorrect & made up information. This lack of thinking just within America's educational environments is suspected to result in weakened brains, which is expected to cause a rise in dementia among the younger generations if nothing is done about it. If it's going to cause that level of brain damage in our children, imagine what it could do in a hospital setting! Making up symptoms & diseases, resulting in less people being properly diagnosed, which could result in more people dying!

And besides the damage it can & is causing in these environments, generative "AI" technology in particular requires breaking copyright law in order to effectively train. When companies have to, en mass, break the law to achieve their goals, it's called 'organized crime.' Generative "AI" technology requires illegal organized crime in order to develop, & because of this, should be stopped dead in its tracks & not pursued by the federal government of the United States. It is illegal to use copyrighted material without the copyright holder's permission, & these generative "AI" companies have been illegally taking people's images, writings, voices, & visual likenesses, without permission or financial compensation to use for their "AI" databases to train their "AI" with. This has been causing hundreds of thousands of artists, writers, voice actors, & coders around the world to lose job opportunities & becoming poor & unemployed due to the way so many companies seek to avoid paying a real person a wage when they can use the literal plagiarism machine that is "AI" generative technology to make something mangled, soulless, & copyright violating for free for them.

Please enforce copyright law instead of encouraging more organized crime when it comes to generative "AI" technology; for humanity's, & America's, sake. Do not comply with this executive order, it blatantly does not have our best interest in mind.
