General Comment

AI pulling from any copyrighted art is still blatant copyright infringement. If you take the time to compare AI pieces to art from real artists, you can see the details and things that it steals. Its not creating anything new, its just shredding existing pictures and taping the pieces together into a new picture. You can even tell the AI to specifically copy an artists style, and it will SPECIFICALLY steal from them. It doesn't "know" their techniques, its not a fan who's studied their favorite artist, its not someone attempting to recreate a master's style. It doesn't know the first thing about how they CREATE, nor does it care. Its just rehashing existing pieces, and while you can argue thats "how inspiration works", at least people can actually feel and be inspired, at least they can feel a passion, and strive to be great, be like their heroes or role models. AI has its place, has its uses, but is NOT ok that it has the right to simply ignore copyright infringement. Anyone can AI together a picture, then trace it, copy it, any number of methods to then claim that "they made it". Not even slightly, not if its a copy of an AI artwork thats just stealing from artists.
