Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2815
Comment on FR Doc # 2025-02305

Submitter Information

Name: Nemo Hana

General Comment

I hope this letter finds you well. I am writing to express my deep concerns regarding the significant investments in artificial intelligence (AI) technologies, particularly in terms of the allocation of taxpayer money and the apparent lack of tangible, long-term benefits these technologies have delivered thus far.

It has become increasingly clear that many AI initiatives fail to deliver on their initial promises. Rather than empowering society, these technologies often perpetuate inefficiencies, introduce new complexities, and create systems that are difficult for the average person to understand or control. In many cases, AI projects have proven to be costly, over-hyped, and ultimately underwhelming in their impact. They are the Beanie Babies of the 21st century.

I strongly believe that taxpayer money should be allocated to projects and technologies that provide clear and direct benefits to society. At a time when there are critical issues such as healthcare, education, infrastructure, and climate change that require urgent attention, it is troubling that substantial funds are being directed towards AI systems that, in many instances, only serve to further the interests of private corporations rather than solving real-world problems.

Furthermore, there is growing evidence that AI systems can exacerbate existing inequalities, undermine privacy, and even replace human jobs, creating more harm than good. The lack of regulation and oversight surrounding AI development only adds to the risks, and as a result, I worry that continued investment in AI could prove to be a misguided and costly endeavor.

I urge you and your colleagues to reconsider the direction of public funding in this area. We must ensure that taxpayer dollars are being spent in ways that are genuinely beneficial and that prioritize the well-being of our communities. It is crucial that any future investments in AI are carefully scrutinized, with clear goals and measurable outcomes that directly benefit the public.

Thank you for your time and consideration. I trust that you will take these concerns seriously and work towards a more responsible allocation of resources.

Sincerely, Nemo Hana
