General Comment

As of right now, AI has been trained on stolen creative work, including but not limited to: visual art, literature, and individual social media posts. Copyright law is settled law, and, as a writer, it sets a deeply concerning precedent that OpenAI or Google would be allowed to use my writing to further refine their AI. Due to these ethical concerns, many consumers have also rejected AI-based products, which creates doubt about how useful AI will be to US commerce and prosperity.

Additionally, I disagree with the opinion that AI would be beneficial for national security. If you cannot even trust AI web search results to have factually correct information that serves the user's aims, how will it be of use for national security reasons?
