Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2819

Comment on FR Doc # 2025-02305

Submitter Information

Name: Mitchell Hendricks

General Comment

Mitchell Hendricks is filing this comment.

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

Executive order 14110, "Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence," is being revoked as part of an action plan. This is stupid.

That executive order stated, "Americans' privacy and civil liberties must be protected as AI continues advancing." Why is this administration putting my civil liberties on the line for some multinational tech company to make a quick buck? My civil liberties are enshrined in the U.S. Constitution and Bill of Rights, and I am appalled that the current administration is willing to abbreviate those in ANY form, regardless of reason.

Honestly, that entire executive order pretty much says that AI will be held to the same standards of consumer protection as other products. Why should something be exempt from the regulations designed to protect me, the consumer, just because it can be reasonably passed off as "artificial intelligence?" It makes no sense to me. Apparently it's okay to put the American people at risk if it's "Artificial Intelligence!"

Finally, I am very concerned about how AI influences copyright, which this order conveniently fails to address. Generative AI is trained on data scraped from the internet, data people actually put work into to create. AI has no original thoughts; it plagiarizes bits and pieces of other works in a vain attempt to put them together into a somewhat coherent mess. It cannot think, it can only imitate, it can only regurgitate.

This plagiarism means that there is no such thing as private property or private enterprise. This weakens capitalism; there is no incentive to create anything if your ideas can be stolen. If I want to put it in terms of partisan buzzwords, a lack of private property is communist. Do you really want to make the United States a communist country, because AI removed the fundamental of having control over my own property?
