General Comment

Copyright laws should not be compromised in favor of advancing GenAI. To do so would be to open the door for the looting of intellectual property. This would have a devastating impact on smaller business and freelance creators, but larger companies would not be spared either. Why would I go see a movie in theaters or from a streaming service when I could get a GenAI to make one? Why would I subscribe to a GenAI service when I could find an open source model and feed whatever I want into it without consequence?

Do not compromise laws for these companies. Every other company must abide by them, why should GenAI be any different? It's no more the future than NFTs were.
